SCAG

Your mower was built to the highest standards in the industry. However, your mower is only as safe as the operator. Carelessness or error on the part of the operator may result in serious bodily injury. Hazard control and accident prevention are dependent upon the awareness, concern, prudence, and proper training of the personnel involved in the operation, transport, maintenance, and storage of the equipment. Make sure every operator is properly trained and thoroughly familiar with all of the controls before operating the equipment.

SAFETY INSTRUCTIONS

 Know the controls and how to stop quickly. READ THIS TECHNICAL MANUAL and instructions furnished with attachments. A replacement manual is available by sending complete model and serial number to:

> Scag Power Equipment 1000 Metalcraft Drive Mayville, WI 53050

- Do not allow children to operate the machine. Do not allow adults to operate it without proper instruction.
- 3. Do not carry passengers. Do not mow when children and others are around.
- 4. Clear the work area of objects (wires, rocks, etc.) that might be picked up and thrown.
- 5. Disengage power to all attachments and shift into neutral before attempting to start the engine.
- 6. Disengage power to attachments, stop the engine and remove key before leaving the operator's position.
- 7. Disengage power to attachments, stop the engine and remove key before making any repairs or adjustments.
- 8. Disengage power to attachments when transporting or not in use.
- Take all possible precautions when leaving the machine unattended, such as disengaging power to attachments, lowering the attachments, setting the parking brake, stopping the engine, and removing the key.
- 10. Do not operate machine while wearing sandals, tennis shoes, sneakers or shorts. Also, do not wear loose fitting clothing which could get caught in moving parts. Always wear long pants and substantial shoes. Wearing safety glasses and safety shoes is advisable and required by some local ordinances and insurance regulations.
- 11. Do not stop or start suddenly when going uphill or downhill. Mow up and down the face of steep slopes; never across the face.

- 12. Reduce speed and exercise extreme caution on slopes and in sharp turns to prevent tipping or loss of control. Be especially cautious when changing direction on slopes.
- Stay alert for holes, rocks, and roots in the terrain and other hidden hazards. Keep away from dropoffs.
- 14. Use care when pulling loads or using heavy equipment.
 - a. Use only approved drawbar hitch points.
 - b. Limit loads to those you can safely control.
 - c. Do not turn sharply. Use care when backing.
 - d. Use counterweights or wheel weights when suggested in this technical manual.
- Watch out for traffic when crossing or near roadways.
- 16. When using any attachments, never direct discharge of material toward bystanders nor allow anyone near the machine while in operation.
- 17. Handle gasoline with care it is highly flammable.
 - a. Use approved gasoline container.
 - b. Never remove the fuel cap of, or add gasoline to, a running or hot engine or an engine that has not been allowed to cool for several minutes after running. Never fill the tank indoors and always clean up spilled gasoline.
 - c. Open doors if the engine is run in the garage. Exhaust fumes are dangerous. Do not run the engine indoors without proper ventilation.
- 18. Keep the machine and attachments in good operating condition, and keep safety devices and shields in place and in working condition.
- 19. Keep all nuts, bolts, and screws tight to be sure the equipment is in safe working condition.
- 20. Never store the equipment with gasoline in the tank inside a building where fumes may reach an open flame or spark. Allow the engine to cool before storing in any enclosure.
- 21. To reduce fire hazard, keep the engine free of grass, leaves or excessive lubricants.

SAFETY INSTRUCTIONS, CONT'D

- 22. The machine and attachments should be stopped and inspected for damage after striking a foreign object. The damage should be repaired before restarting and operating the equipment.
- Do not change the engine governor settings or overspeed the engine.
- 24. When using the machine with mower, proceed as follows:
 - a. Mow only in daylight or in good artificial light.
 - Never make a cutting height adjustment while engine is running if the operator must dismount to do so.
 - c. Shut the engine off and remove key when removing the grass catcher or unclogging chute.
 - d. Check the blade mounting bolts for proper tightness at frequent intervals.
- 25. Under normal usage, the grass catcher bag material is subject to deterioration and wear. Check bag frequently for deterioration and wear and replace worn bags. Check that replacement bags comply with the original manufacturer's recommendations or specifications.
- 26. Disengage power to mower before backing up. Do not mow in reverse unless absolutely necessary and then only after observation of the entire area behind the mower.
- 27. The discharge chute must be installed and in the down position on the side discharge cutting unit except when optional grass catcher is completely installed. If the cutting unit discharge ever plugs, shut engine off and wait for all movement to stop before removing obstruction.
- 28. Perform only those maintenance instructions described in this manual. If major repairs are needed or assistance is desired, contact an Authorized Scag Servicing Dealer. To ensure optimum performance and safety, always purchase genuine SCAG replacement parts and accessories. NEVER USE "WILL FIT" replacement parts or accessories made by another manufacturer. Use of unapproved replacement parts may void the warranty.

AWARNING

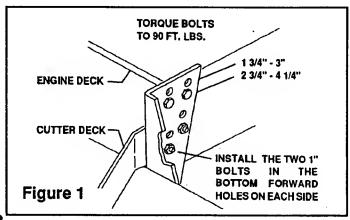

DO NOT operate on steep slopes. To check a slope, attempt to back up (with cutter deck down). If unit can back up the slope without the wheels slipping, then slope should be managable with careful operating procedures.

ASSEMBLY INSTRUCTIONS

- 1. Remove all crating and packing materials.
- 2. Lay out loose bolts and nuts according to "Where Used" as listed in the loose parts packing list.
- 3. Block the cutter deck up, about two inches off the floor.
- 4. Remove belt cover. Remove mower engage control rod.
- 5. Move tractor assembly to cutter deck so that mounting brackets clear engine deck.
- 6. Unwind winch lift cable and tilt engine deck to horizontal position. Align the lower set of holes in the mower deck brackets and insert drift pins on each side to temporarily locate holes.

IMPORTANT

7. Use lower set of holes in deck mounting brackets for mowing in the range of 2-3/4" through 4-1/4". Use the upper set of holes in the deck mounting brackets for mowing in the range of 1-3/4" through 3". (See figure 1) Insert (6) 1/2-13 x 1-1/2 bolts, (2) 1/2-13 x 1" bolts, flat washers, lock washers and hex nuts. Tighten all eight bolts very securely. Then go back and retorque each one to 90 ft. lbs.

ASSEMBLY INSTRUCTIONS, CONT'D

- 8. Raise cutter deck using lift winch and assemble front caster wheels using eight (8) 5/16-18 x 3/4" bolts, lock washers and nuts.
- 9. Install the mower engagement control rod. Secure with hair pin cotter at both ends.
- 10. Route blade drive belt over engine pulley. Be sure belt clears the belt guide saddle at center spindle and is positioned between the pulley and its belt guide at the center pulley support bracket.
- 11. Push mower engagement lever forward until it snaps to rest. Adjust belt tension as specified in adjustment sections. DO NOT adjust too tight.
- 12. Install grass discharge deflector chute using two (2) 5/16-18 x 1" bolts and elastic stop lock nuts.
- 13. Place seat assembly on the seat support spring using two (2) 3/8-16 x 3/4" bolts and lock washers. Seat can be positioned forward or backward for operator comfort.
- 14. Insert steering handle on shaft and secure with one (1) 5/16-18 x 1-3/4" bolt, two (2) washers and a locknut. Tighten securely.
- 15. Reduce tire pressure to values below.

Caster Wheels	25PSI
Rear Steering Wheel	25PS
Drive Wheels	15PSI

NOTE: Tires are over inflated for shipping purposes.

WARNING

Severe chemical burns may result from improper handling of battery electrolyte. Use proper eye, skin and clothing protection.

External contact: Flush with water.

Internal contact: Do not give fluids that would induce vomiting. Drink large quantities of water, followed with milk of magnesia, beaten egg or vegetable oil Contact a physician immediately! Eye contact: Flush with water for at least 15 minutes and get medical attention immediately!

A WARNING

Explosive gases are vented from a battery when being charged or discharged which could explode if exposed to a flame or spark.

17. Fill each battery cell with electrolyte solution to level indicator. Charge at 3 to 5 amps for about 2 hours. Check fluid level and add electrolyte until level is up to the bottom of the split ring.

NOTE: Future need to adjust fluid level requires distilled water.

Wash and dry off battery. Coat terminals with grease to minimize corrosion.

Sparking can be minimized by connecting the positive cable first, covering the connection with the rubber boot, then connecting the negative cable.

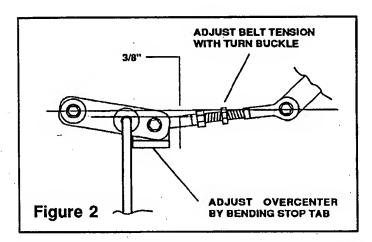

- 18.Reinstall battery.
- 19.All oil is removed from engine before shipment. Add oil to the level specified in the engine manual.
- 20. Fill fuel tank.
- 21. Open shut-off valve under tank.
- 22. After initial run and inspection of cutter belt, replace belt cover.

ADJUSTMENT INSTRUCTIONS

Cam Link Over-Center

The over-center adjustment must be checked and adjusted before setting the belt tension.

Engage the blade clutch lever and check for proper over-centering. There should be about 3/8" between rod and straight edge. (See figure 2) Bend the stop tab to adjust the clearance.

Belt Alignment

Align belt horizontally between the center spindle pulley and engine pulley. Remove or install the spacer located under the stationary idler bracket to get belt and pulley alignment.

Belt Guides

Check that all belts clear their belt guides by about 1/8 to 3/16 inch. Adjust guides if necessary.

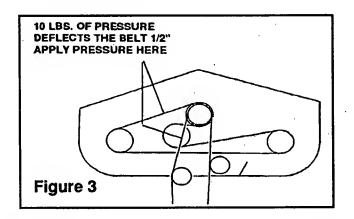

Drive Belts

Cutter Deck Drive Belt:

Belt tension should not be adjusted until overcenter spacing is checked. Adjust blade drive belt so that the belt moves 1/2" with 10 pounds of pressure. (See figure 2)

Blade Drive Belt:

Adjust cutter deck belt by turning lock nut on "J" pull rod where applicable. About 10 lbs. pull sideways deflects belt 1/2 inch. Test belt at short section between center spindle and left hand spindle (See figure 3)

IMPORTANT: Readjust new belt tensions after 4 hours of operation and again after about 24 hours to take up initial stretch and wear.

Cutter Deck

Due to the many conditions that exist, it is difficult to suggest a setting that will work for every lawn. The two adjustments that can be made on these decks are pitch and height.

PITCH is the angle of the blades (comparing front to rear). A positive pitch is when the front (leading) edge of the cutting plane is lower than the rear (trailing) edge. Level pitch is when both front and rear are basically level. A negative pitch is when the leading edge is higher than the rear edge.

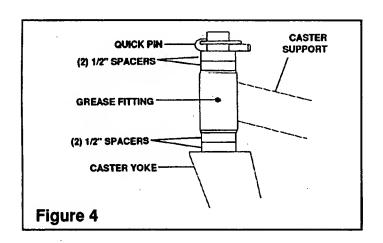

ADJUSTMENT INSTRUCTIONS

HEIGHT is the nominal distance the blade is off of the ground (this measurement is made with the blades pointed side to side with distance measured between cutting tip and ground). Adjusting the blade height can be done by moving any number of the five spacers on the blade mounting bolts to the top of the spindle shaft or below the spindle shaft (all blades should be positioned equally). Unit is shipped with one spacer on top and four underneath. (See figure 5) This adjustment does not affect blade pitch.

For best results, keep the cutter deck high in relationship to the engine deck and the blades low in the cutter deck; i.e. 3,4,5 spacers below the spindle shaft.

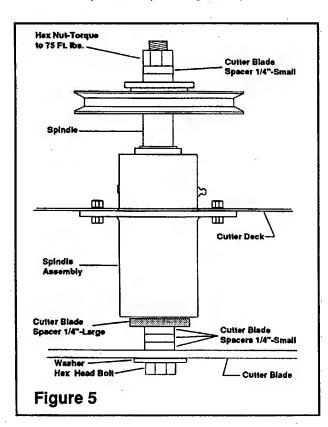

Additional range to the cutting height can be achieved by repositioning the cutter deck in relationship to the engine deck. (This adjustment also affects the pitch of the deck). There are two positions. (See figure 1, page 3) Suggested mounting is in the bottom hole. For cutting lower, mount the cutter deck in the upper hole to drop the deck down. Check the cutter deck belt alignment after repositioning the deck.

Caster spacers also can be repositioned to change cutting heights and to change the pitch of the deck. (See figure 4)

Tapered Bearing Spindle Assembly

Adjusting the blade height an be done by moving any number of the four smaller 1/4" spacers on the blade mounting bolts to the top of the spindle shaft or below the spindle shaft. (All blades should be positioned equally.) The tapered bearing spindle has a large 1/4" spacer that is installed directly below the spindle housing and is secured to the spindle with two roll pins. The blade can be adjusted all the way up to the spindle assembly if all the smaller 1/4" spacers are removed and installed above the pulley. The larger 1/4" spacer can then be removed along with the roll pins. (Do not install the larger 1/4" spacer above the pulley, store it in a conveniant location away from the machine.) When any 1/4" spacers are installed above the blades, the larger 1/4" spacer must be installed directly beow the spindle housing. If a smaller 1/4" spacer is installed directly below the spindle housing and contacts the retaining ring, a non-warrantable failure will occur. For best cut and discharge, a minimum of three spacers should be between the blade and spindle. (See figure 5)

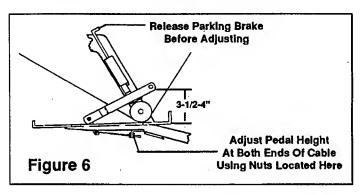

ADJUSTMENTS CONT'D

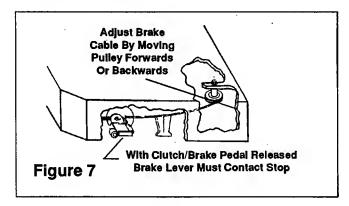

Clutch/Brake Control

Three adjustments must be made together and in proper sequence or improper operation and possible damage to the clutch cable, brake cable, pulley, and or brake system may result.

 With parking brake released adjust foot pedal so that it is 3-1/2" - 4" above foot rest (see figure 6). HINT: Use a 2x4 board on edge between pedal and foot rest for approximate positioning. Adjust foot pedal position by adjusting the two cable mounting nuts located on each end of the cable housing.

 To adjust the brake, release the clutch/brake pedal (foot pedal is in the up position, with tension on the transaxle belt). Move brake cable pulley (See figure 7) forward or backward in its slot to permit transaxle brake lever to rest against its stop (See figure 8)

3. Then adjust brake lever nut to permit free movement of lever about 1/8" from stop by pushing lever with hand pressure. (Pads must not "drag" on brake disc when adjusted.) If brake lever is too tight, shifting may be impossible and brake wear will be excessive.

OPERATION AND INITIAL RUN-IN

Transaxle shifter neutral may require adjustment so that starter engages neutral stop. With transaxle in neutral, rotate swivel joint to lengthen or shorten shift rod so shift quadrant reads neutral. (See figure 9)

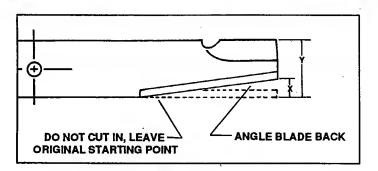

- 1. Set parking brake before starting engine.
 Please Remember: To start engine, three interlock switches must be activated:
 - a. The shift lever must be in neutral.
 - b. The mower engage lever must be pulled all the way back (and held there).
 - c. The foot interlock switch pedal on the left side must be depressed.
- 2. Run new engine at half speed about 5 minutes before applying any load.
- 3. Adjust carburetor fuel-air mixture valves according to specifications in engine manual.
- 4. To release parking brake, depress right hand foot pedal, lift brake lever and rotate 90 degrees and release foot pedal.
- Readjust shift lever for proper neutral, if necessary. Note: Do not shift on the go. You must declutch before shifting.

OPERATION AND INITIAL RUN-IN

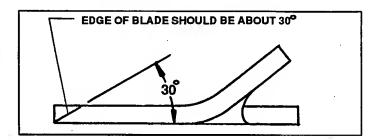

- Check for correct routing of belts and for correct clearance of belt guides.
- 2. Check for correct alignment and initial tension of cutter blade drive belts.
- 3. Check that all fasteners are correctly tightened.
- 4. Check engine oil level.
- 5. Fill fuel tank with clean fresh lead free gasoline.
- 6. To start engine: Pull mower engagement lever to off position. Depress the left foot (operator presence) pedal. Shift transaxle into neutral. Put parking brake in engaged position. Adjust throttle and choke as required. Turn ignition key to start.
- 7. To engage blades release the parking brake. Push mower engagement lever forward until over-center snaps into the engaged position. Allow belts to run-in for 5 minutes initially.
- 8. To operate the unit forward and backward, hold clutch pedal down while releasing brake lock. Shift into desired gear. Release clutch pedal slowly. Check that all systems function correctly. To change gears, always declutch before shifting.
- To coast to a stop, depress clutch pedal partially. To fully brake, depress clutch pedal completely. Always engage parking brake before leaving the machine.
- 10. Shut off engine and recheck cutter deck drive belts for proper tension, and any signs of rubbing. Correct and adjust as necessary.

MAINTENANCE

Cutter Blades

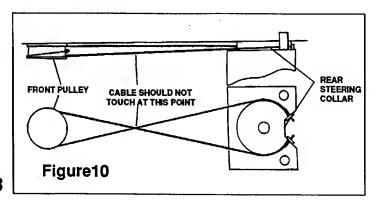

Do not sharpen (X) beyond 1/3 of the width (Y) of the blade.

Suggestion: Dress the blade with a file. Using a wheel grinder may burn the blade.

Steering Cable Routing

When the steering cable is routed between the front pulley and the rear steering collar, it is very important that the cable does not rub where it crosses. The top of the cable end from the front pulley must go over the top of the lower cable end. (See figure 10) Cable should be tightened until the slackness has been removed. Cable should not be under tension.

LUBRICATION & MAINTENANCE

		ours (Biweekly) 10 Hours (Monthly)	
		PROCEDURE	COMMENTS
		Check engine oil Clean blower screen Clean debris under belt cover Sharpen cutter blades	Do not over fill MORE OFTEN IF NECESSARY
		Grease spindle bearings	+ US Lithium MP White Grease 2125
X X X		Change engine oil Check battery acid level Clean air filter Check tire pressure	See engine mtg. information Distilled water only Adjust as required
- 3	X X X	Grease caster wheel bearings Grease caster wheel pivots Grease idler pulley pivots Remove hubs from axle & grease	Chassis grease Chassis grease Chassis grease Anti-sieze compound
	X X X X	Clean and adjust spark plugs Adjust brake lever freeplay Grease rider frame pivot Grease control belicrank	See engine manufacturer information See Adjustments Clutch/Brake (page 7) Chassis grease Chassis grease
	X X X	Grease left axle bearing Grease steering handle Grease foot pedal	Chassis grease Chassis grease Chassis grease
	X X X	Grease rear wheel pivot vertical Grease rear wheel bearing Lubricate idler pulley cam links	Chassis grease + US Lithium MP White Grease 2125 LPS type lubricant

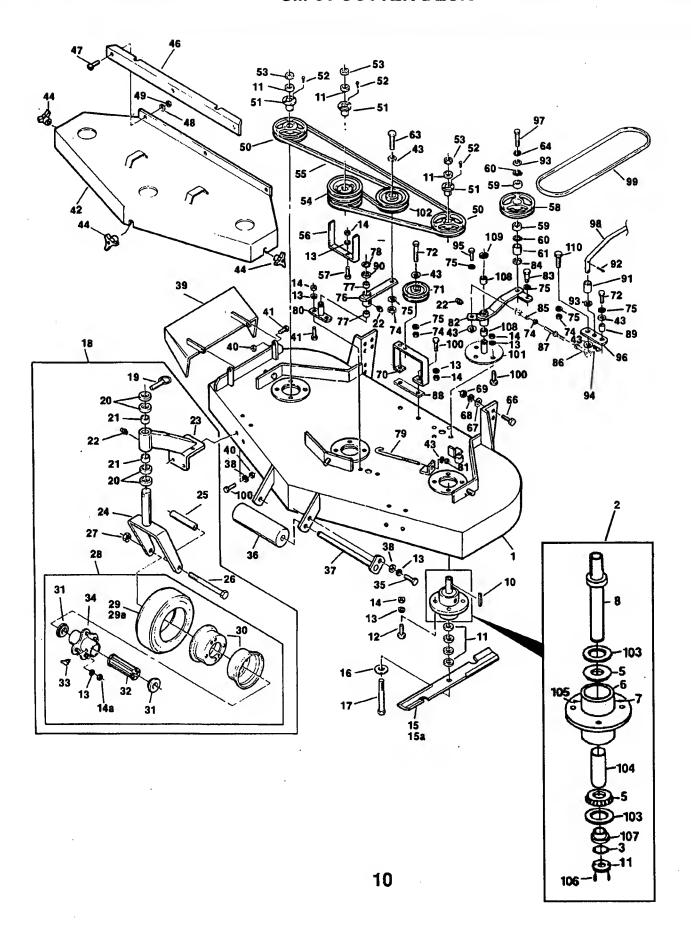

Depending on climate and environment, lubrication may be required every 8 to 40 hours.
 Do not over grease as this may damage seal.

+ Compatible Greases:

Lidok EP #2 found at Industrial Shops
Ronex MP found at Exxon Service Stations
Shell Alvania #2 found at Shell Service Stations
Mobilux #2 found at Mobil Service Stations
Super Lube M EP #2 and Super Stay-M #2 found at Conoco Service Stations

Note: Transaxle does not require lubrication, however users have found that a few tablespoons of STP Oil Treatment added to the transaxle extends its life. We suggest this procedure once per season.

A WARNING

If incorrectly used, this machine can cause severe injury. Those who use and maintain the machine should be trained in its proper use; warned of its dangers, and should read the entire manual before attempting to set up, operate, adjust or service the machine.

LIMITED WARRANTY-COMMERCIAL EQUIPMENT

Any part of the Scag commercial mower manufactured by Scag and found, in the reasonable judgment of Scag, to be defective in materials or workmanship, will be repaired or replaced by an Authorized Scag Service Dealer without charge for parts and labor. This warranty is limited to the original purchaser and is not transferable. Proof of purchase will be required by the dealer to substantiate any warranty claims. All warranty work must be performed by an Authorized Scag Service Dealer.

This warranty is limited to the following specified periods from the date of the original retail purchase for defects in materials or workmanship:

- * Frame, deck and structural components including oil reservoirs 1 year
- * Wear items including drive belts, blades, hoses and tires are warranted for 90 days
- * Engines and electric starters are covered by the manufacturer's warranty period.
- * Drive system components are covered by the manufacturer's warranty period.

 (Excluding fittings, hoses, cooling system, oil reservoir, drive belts). Drive systems are warranted by Scag Power Equipment in conjuntion with the component manufacturer.
- * Batteries are covered for 1 year.
- * Any Scag product used for rental purposes is covered for 90 days.

The Scag mower, including any defective part must be returned to an Authorized Scag Service Dealer within the warranty period. The expense of delivering the mower to the dealer for warranty work and the expense of returning it to the owner after repair will be paid for by the owner. Scag's responsibility is limited to making the required repairs and no claim of breach of warranty shall be cause for cancellation or rescission of the contract of sale of any Scag mower.

This warranty does not cover any mower that has been subject to misuse, neglect, negligence, or accident, or that has been operated in any way contrary to the operating instructions as specified in the Technical Manual. The warranty does not apply to any damage to the mower that is the result of improper maintenance, or to any mower or parts that have not been assembled or installed as specified in the Technical Manual. The warranty does not cover any mower that has been altered or modified changing performance or durability. In addition, the warranty does not extend to repairs made necessary by normal wear, or by the use of parts or accessories which, in the reasonable judgment of Scag, are either incompatible with the Scag mower or adversely affect its operation, performance or durability.

Scag Power Equipment reserves the right to change or improve the design of any mower without assuming any obligation to modify any mower previously manufactured.

All other implied warranties are limited in duration to the one (1) year warranty period or ninety (90) days for mowers used for rental purpose. Accordingly, any such implied warranties including merchantability, fitness for a particular purpose, or otherwise, are disclaimed in their entirety after the expiration of the appropriate one year or ninety day warranty period. Scag's obligation under this warranty is strictly and exclusively limited to the repair or replacement of defective parts and Scag does not assume or authorize anyone to assume for them any other obligation. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

Scag assumes no responsibility for incidental, consequential or other damages including, but not limited to, expense for gasoline, expense of delivering the mower to an Authorized Scag Service Dealer and expense of returning it to the owner, mechanic's travel time, telephone or telegram charges, rental of a like product during the time warranty repairs are being performed, travel, loss or damage to personal property, loss of revenue, loss of use of the mower, loss of time or inconvenience. Some states do not allow the exclusion or limitation of incidental or consequential damages. So the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

PLEASE BE CAREFUL

- 1. Keep all shields in place, especially grass discharge.
- 2. Stop machine and remove spark plug wire to adjust or service.
- 3. When mechanism becomes clogged, stop engine before cleaning.
- 4. Keep hands, feet and clothing away from power-drive parts.
- 5. Keep off implement unless seat or platform is provided.
- 6. Keep others off.
